

Scene 01

Compare 3 quotes, send 1 CAW payment in 60 seconds.

Open on the agent purchase, not the architecture. The first frame tells the judge what the agent buys and how to break it.

Vendor quote	CAW receipt	Order mutation	CAW proof
SLA, risk, price, and wallet address appear.	Existing live proof is attached honestly.	Price or vendor wallet changes on screen.	Pact, tx, denial, audit counts.

Hero line: Compare 3 vendor quotes, send 1 CAW payment in 60 seconds. CAW blocks price and wallet edits.

Architecture

Judge path

Select an agent purchase, mutate price or vendor, then inspect the live CAW proof.

CAW-bound agent procurement

RiskOps Agent buys audit data with scoped wallet authority

Compare vendor quotes, select the approved resource, attach existing live CAW payment proof, mutate price or wallet address to verify the boundary.

Security audit resource procurement

RiskOps Agent can spend only inside this CAW Pact boundary.

Inline edit note: judge_order_mutation

Agent mission

Security-audit API/data package for today's treasury risk report

15-minute risk feed, vendor receipt, and CAW execution proof

CAW budget

0.002 SETH

CAW holds the agent wallet authority and limits chain, token, destination, and max amount.

Selected vendor

AuditMesh API

approved for CAW payment

RiskOps Agent decision log

Compare quotes by SLA, risk score, price, and wallet allowlist.
Select the approved vendor that stays under the CAW Pact budget.
Request payment authority only for the selected destination and amount.
Refuse execution if a judge changes the price or wallet address.

Vendor quote table

Static demo quotes are visible product state; only the approved resource maps to CAW payment authority.

Vendor	Resource and SLA	Risk	Price	Wallet
AuditMesh API	Security-audit data package	18	0.001	0x1111111111111111

Scene 03

The agent chooses a vendor before payment.

The demo shows three quotes. Only **AuditMesh API** fits price, risk, SLA, and wallet allowlist.

Focus target

```
.split-secondary
```

Input beat

Selected vendor, CAW budget, and decision log update.

Judge belief

The agent is doing economic work.

Recording note: keep cursor movement short and land on the quote table before the narration says "select vendor".

Mutation result

Scene 04

Break the order before signature.

The main consequence is a product state change: **policy_blocked**, over cap or non-allowlisted vendor wallet.

Readable proof lower-third

```
requested: 0.005 SETH
```

```
decision: policy_blocked
```

```
reason: amount cap or vendor wallet
```
